

CONQUERING YOUR ASSET MANAGEMENT CHALLENGES

ASSET MANAGEMENT

Are you trying to meet a standard of service with an aging infrastructure and limited resources? Is system preservation a challenge and capacity expansion nothing more than a dream? Have you figured out how to minimize your total cost of ownership?

JMT Technology Group offers and supports a variety of technology solutions and services to assist organizations to implement asset management programs. We assist with the identification of needs and evaluation of publicly and commercially available software products. Based on the outcome of that evaluation, we can assist with the selection of a solution and its implementation, including the collection, compilation, management and analysis of asset data. If existing commercial products do not meet the needs of your organization, JMT Technology Group can design, develop and deploy custom desktop, web, and mobile solutions to meet your organizational goals and objectives.

With staff comprised of former owners, managers and operators of public and private infrastructure, JMT provides a unique owner perspective to asset management. We bring together our technology professionals and subject matter experts to identify and implement the best solution for your organization, turning challenges into results that meet or exceed the standards of service that your customers expect.

WE'RE READY WHEN YOU ARE

Our attentiveness to customer service has created strong and successful working relationships. We welcome challenge and are committed to delivering our solutions on time and within budget!
