

# EVERYTHING YOU NEED, WHEN YOU NEED IT

## ENTERPRISE CONTENT MANAGEMENT (ECM)

ECM comprises standards, practices, methodologies and technologies that enable the enterprise to more effectively capture, store, manage, deliver and preserve unstructured content. In this context, the term “unstructured content” refers to the myriad of files and images that are used daily.

Every day, we are constantly generating, saving and editing hundreds of documents through routine operations. Beyond its core, ECM has expanded its reach and taken on the functional characteristics of related technologies such as business process management (BPM), collaboration, and enterprise application integration (EAI). JMT offers ECM solutions that include tools for business process modeling and analysis, workflow management and the integration of ECM with other enterprise applications including GIS, that generate and manage “structured” content such as relational and geospatial databases.

The boundaries that once separated these technologies are quickly blurring, and JMT offers solutions that provide significant opportunities for the enterprise to improve the manner in which business is conducted. Through the proper application of ECM, the enterprise is capable of significantly reducing the time and costs incurred by users searching for files. Be confident in the decisions that you make, knowing you have everything you need, when you need it.

## UNSTRUCTURED CONTENT TYPES

Word Processing and Spreadsheet Files

---

GIS Data

---

Personal Databases

---

Presentation Files

---

Digital and Scanned Images

---

CADD Files

---

## WE'RE READY WHEN YOU ARE

---

Our attentiveness to customer service has created strong and successful working relationships. We welcome the challenge and are committed to delivering our solutions on time and within budget!

# ENTERPRISE CONTENT MANAGEMENT SOLUTIONS

## CITY OF BALTIMORE, MARYLAND DEPARTMENT OF PUBLIC WORKS

JMT Technology Group has implemented a comprehensive enterprise content management (ECM) system to support the ongoing operations and management of the Department of Public Works. The ECM system was implemented to address document management, automated workflow, collaboration, and regulatory compliance business needs within the Department. JMT Technology Group experts performed detailed requirements analysis, system and database design, configuration, back file document importation to the ECM repository, and user training. Also included are workflow design and implementation and the most critical component -- the integration of the ECM system with the Department's enterprise GIS web application.

## CITY OF BALTIMORE, MARYLAND DEPARTMENT OF TRANSPORTATION

JMT Technology Group assisted the City of Baltimore Department of Transportation (DOT) with the implementation of an enterprise content management system. The system provides capabilities to capture all engineering design-related documents into a document repository and linking these documents to GIS features that represent completed projects. This implementation provides DOT staff with a user friendly interface to browse and search for content using keyword searches.

## CITY OF YORK, PENNSYLVANIA BUREAU OF PERMITS, PLANNING AND ZONING, AND FIRE DEPARTMENT

JMT Technology Group is implementing an enterprise content management system to process and manage building permits and inspections for the City of York. Through the application of this solution, the City will cut down on costs by eliminating the use of paper forms and documents that are completed and processed by hand to improve business processes and access to content.

### TECHNOLOGY FRAMEWORK

Our enterprise content management systems are built using OnBase, a Hyland Software Solution
